

Evolving New Collaboration Services for Future Network

Project Leader

SHIKIDA Mikifumi, Dr. Eng.
Professor, Information Systems Engineering

1. Objective

This project is aimed at:

Creating new methods to develop human-oriented collaboration systems for future networks. These systems aim to make human society more harmonious. This project consists of three elements. (1) Video-conferencing systems to convey the feeling of “being together”, (2) Collaboration systems for medical and health-care, and (3) Collaboration systems in large-scale datacenters.

2. Project Outline

To that end, the project will consist of the following phases:

- (a) The creation of new collaboration methods
- (b) Experiments on prototype systems
- (c) Publications of academic papers

3. Expected Performance

In this project, the successful candidate would be expected to:

- (a) Work independently on a research topic
- (b) Develop prototype systems for experiments
- (c) Assist other members of the laboratory with their research
- (d) Publish research results in international papers

4. Required Skills and Knowledge

The successful candidate for this project will have the following knowledge and skills:

- (a) Ability to communicate and discuss in English
- (b) Knowledge of TCP/IP networks and network applications
- (c) Programming skill (C, Java, etc.)
