

THE INVISIBLE BORDER.

～The unified landscape design on differently -managed open space. ～

Infrastructure Systems Engineering Course
1125125 Ayami Nonaka

This master design thinks about the design that joins manager's different outdoor space through two projects.

First, the borderline of the construction of the road, the park on ground for the design, and the circumference is very eased in "Midori's five group combination forum student design game 2008", and it is examined whether cooperation should be attempted.

Secondarily, it proposes the maintenance plan of the Kochi port harbors green space. In the maintenance plan that this Kochi Prefecture proposes, the spectacle is not so examined. To leave a beautiful, excellent spectacle for the next generation, the place in which it should review it based on the port planning : in adding a new proposal, and maintaining the borderline that can be done by various elements such as construction, the plaza, embankments, and roads where the waterside in the Kochi harbors green space is composed as one body. It designs, and feedback to the port planning proposes the landscape planning that joins the outdoor space of office building, housing complex, and "[Wanpakukouchi]".
